

# Böttcherin FR-1000

## Dampening roller cleaner

### Uses

The dampening characteristics of modern continuous dampening units depend on the surface of the dampening rollers and on their cleanliness. Especially in alcohol reduced printing, there is an increased build-up of ink on the dampening rollers which desensitizes their surfaces reducing their hydrophilic nature.

Böttcherin FR-1000 is a special wash for removal of ink build-up on dampening pan rollers or dampening metering rollers in continuous dampening systems, desensitising both rubber and chrome surfaces.

### Characteristics

- easily applicable because of user friendly 1-l-metal container
- high ink dissolving power
- no accumulation in the dampening water affecting the printing process
- not water miscible
- fast evaporating
- fast wetting of dampening rollers after cleaning
- free of aromatics and of acetone

### Application

Depending on the degree of dirtying, the dampening rollers should be cleaned occasionally with Böttcherin FR-1000.

With the press stationary, apply Böttcherin FR-1000 with a cloth on the dampening rollers and wipe clean. Wear protective gloves during application. Follow all press safety procedures.

### Marking

Böttcherin FR-1000 is classified and marked according to EC-Directive 88/379 EEC - in its latest version.
