

BöttcherPro EK

Decalcifying Gel

Uses

Cleaning paste which removes stubborn calcium contamination. Feboclean EK when used on a regular basis prevents glazing, as a result from paper lint residues.

Characteristics

- based on solvents, acid and auxiliaries
- flash point > 61 °C
- water miscible, free of aromatics and CFC's
- good cleaning performance for removing calcium contamination as a result from paper lint residues
- restores the original roughness and colour pick-up of the rollers
- regular application (once weekly) prevents calcium build-up on ink rollers
- extends roller life span

Application

After washing with e. g. „Böttcherin Blue“ or „Böttcherin 6003“, apply Feboclean EK and let it distribute through the roller train for 3 -5 minutes. Wash off with warm water until solution runs clear. Repeat as necessary. Regular application of Feboclean EK (once weekly) prevents calcium build-up on ink rollers. The original roughness of the rollers will be restored and roller life span will be extended.

Marking

Feboclean EK is classified according to EC-Directive 88/379/EEC - in its latest version. It is not classified as a dangerous good in the sense of national and international transport regulations (GGVSE - ADR/RID - GGV See/IMDG).
